## WORK EXPERIENCE

*Entrepreneurship*  
**now** Founder [@coders.school.pt](https://coders.school.pt) — Douro Valley, PT  
Coding school for kids, teenagers and adults in Douro Valley. We want to change the way kids and teenagers use technology: from consumers to producers; and, help adults join the technology community.

*Industry*  
**2022** PhD Software Engineer Intern, FACEBOOK/META — London, UK  
Added taint analysis for data leaks detection in iOS (Objective-C). · TECHNOLOGIES: OCaml, Pulse, Taint Analysis · Ref: Dulma CHURCHILL

**2021** PhD Software Engineer Intern, FACEBOOK/META — London, UK  
Added cost analysis support for C/C++ by implementing models for some C++ standard library functions to catch potential complexity increases in Meta's codebase. The models implemented fixed ~1.2k over-approximations and detected ~3.4k new execution complexity increases for 3 of Meta's C++ projects. In 10 days, C/C++ cost analysis detected ~300 complexity increases for Meta's diffs. · TECHNOLOGIES: OCaml, Abstract Interpretation, InferBo, Cost · Ref: Ezgi ÇİÇEK

**2017–2018** RPA Developer, KPMG — Porto, PT  
Robotic Process Automation Developer. Responsible for designing and delivering automations in Automation Anywhere (AA) for VAT processing in the pharmaceutical sector.  
TECHNOLOGIES: Automation Anywhere and JavaScript · Ref: Lara CONCEIÇÃO and Daniel PIRES

*Research*  
**2019–now** PhD Student/Researcher, TÉCNICO/INESC-ID — Lisbon, PT  
Performing research on static analysis optimization to improve software security and productivity. Funded by the Portuguese NSF (4 years). This research is performed in parallel with a project funded by the **Carnegie Mellon University**: *SecurityAware: Fine-grained approach to detect and patch vulnerabilities*. The project aims to develop a novel framework to efficiently detect security issues through the implementation of more fine-grained approaches to CI static analysis. · Ref: Rui ABREU · [rui@computer.org](mailto:rui@computer.org)

**2018–2019** Junior Researcher, INESC-ID — Lisbon, PT  
Analysis of the entire corpus of documents published in the last 30 years in the Portuguese law search engine. Funded by the Portuguese Government. TECHNOLOGIES: Python, Grafana, SQL, Pandas, NLTK
